

# Make a Compass!

Normally, compasses use North, South, East, and West to navigate.

At home, you can make a compass that uses Left, Right, Ahead, and Behind.

1. Cut a circle out of paper, and write "Ahead" at the top of it, and "Behind" at the bottom.
2. On the Left side (where the "W" is on the picture of the compass), write "Left," and on the opposite side, write "Right."
3. Decorate your compass however you like.

See the next page for an example of how to decorate your compass, and how to use it on an adventure!

# Go on an Adventure!

Send yourself on an adventure...  
inside or outside, alone or with friends!

Once you've made your compass, choose a location to explore. Will it be inside your house? Your backyard?

On a piece of paper, write down five or more random numbers (all below 20).

Next, write directions next to each number. Left, Right, Forward, or Backward.

Now use your compass to find out where you'll end up! Take the number of steps you've written in the directions you've written next to the numbers. Or give your instructions to a friend or sibling!
